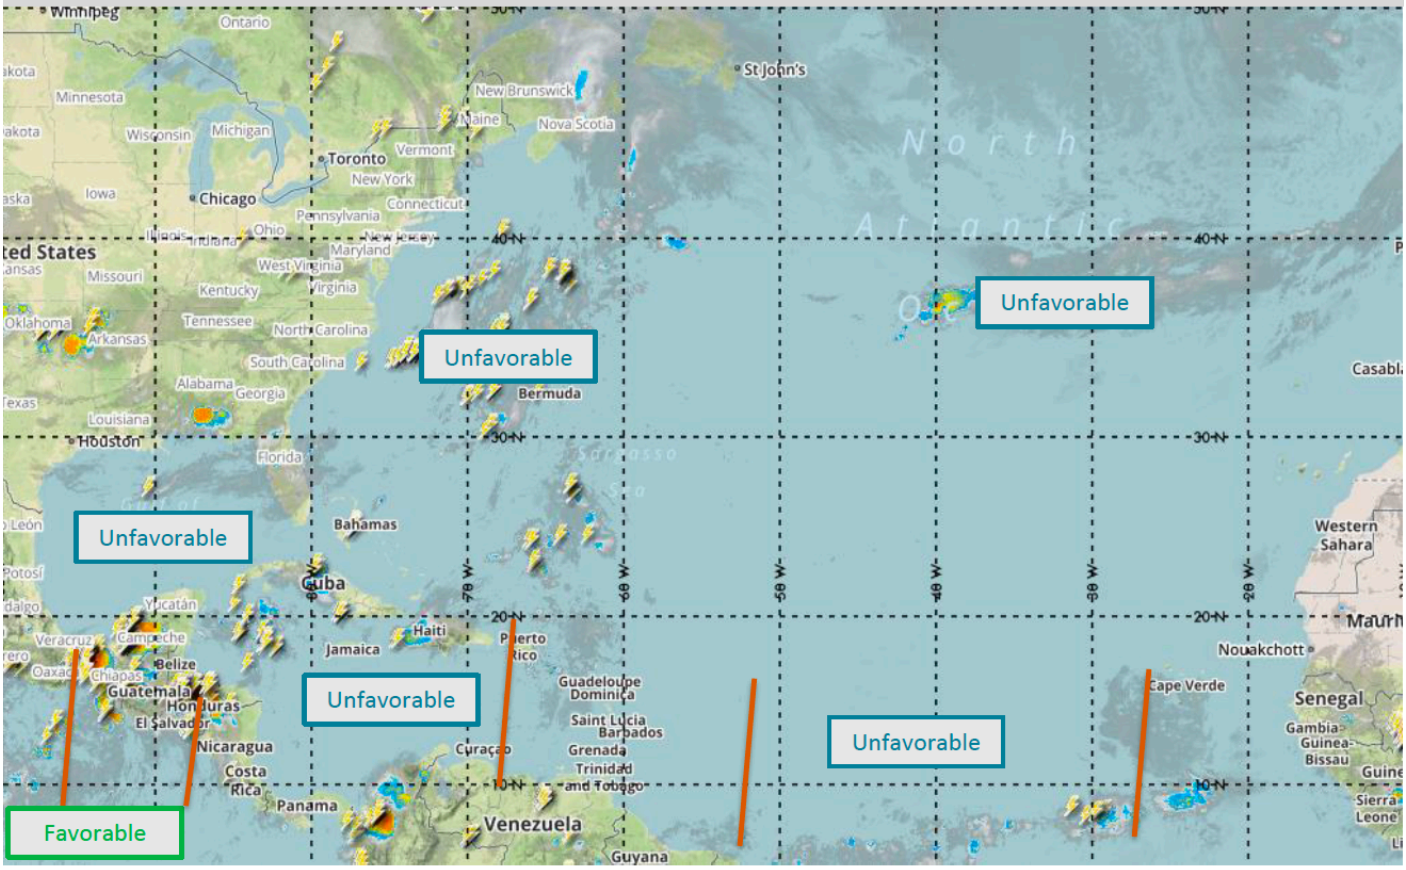
2019 Hurricane Season Gulf of Mexico

(*Source: WeatherOps, powered by DTN*)

HEADLINE

Effective: August 9, 2019 – 0500 CT / 1000 UTC

Tropical cyclone formation is unlikely through 7 days.



Active Tropical Threats					
Feature #	**Name**	**Current Location**	**7-Day Development Potential**	**Sustained Wind**	**Current Movement**
-	-	-	-	-	-

General Discussion

A tropical wave is moving into increasingly unfavorable conditions across the northeast and central Caribbean Sea. Strong wind shear will prevent development in this area. Elsewhere, a large tropical wave is moving through a large plume of dry air across the eastern Atlantic. Dry air will continue to suppress waves across the central and eastern Atlantic over the next several days. There are no signs of well-organized tropical activity through the next 7 days.

Today's River Stages (NOAA)
